

Care and Handling Instructions

Care and Handling Instructions

These flowers are shipped dry and should be hydrated immediately upon arrival as they have been without water for over 24 hours and are very thirsty. Allow time for your flowers to revitalize (8 hours minimum) to enjoy the full splendor of your product.

UNPACK FLOWERS IMMEDIATELY UPON ARRIVAL

Corsages, Boutonnières and Rose Petals

These will arrive in clear cases and are easily removed from the shipping box.

1. Place boutonnières, corsages and rose petals inside a refrigerator between 34-36 degrees. **DO NOT FREEZE**
2. Keep boutonnières and corsages refrigerated until the last possible moment.
3. Transport boutonnières and corsages in the clear cases they were delivered in. This will protect them until they are used.

4. To use, untie from box, remove water tube and use pin included to carefully place on jacket or dress.

5. Rose petals can be used to decorate cake table, in basket to spread on floor as bride walks in, sign in or gift table, etc.

Bridal Bouquet (includes bridal, bridesmaid and throw away bouquets)

1. Always start with a clean vase or display bucket.
2. Add flower food and tap water. Approx. 1-2 inches of water is sufficient.
3. Use clipper provided to carefully cut the plastic straps that hold the bouquets to the shipping box.

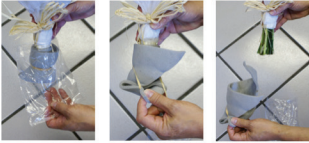

4. Paper wrap should be removed to inspect bouquet upon arrival, if there are any minor signs of bruising on the outer petals, they can be removed carefully before the event.

(Keep paper wrap that bouquets arrive in for transportation to event.)

5. Remove hydration sponge and bag from the lower stems.

6. Cut 1/2 an inch off of the bottom of the stem with flower clipper provided.

7. Place in 1-2 inches of water making sure only the stems are in water without getting the ribbon wet.

8. Place stems in vase or bucket immediately after cutting to ensure proper hydration.

9. Place flowers in a cool location out of sunlight and away from heat sources. (To maintain bloom development keep in refrigeration at about 34-36 degrees. This will keep the flowers from opening further. Leaving at room temperature (between 72-78 degrees) will promote natural development of bloom and will help blooms open beyond the stage at which they arrive. 1-2 days before the event is recommended.)

10. Avoid touching flowers. Touching the petals may cause bruising that is not immediately visible but can appear as browning or wrinkles.

11. Avoid laying bouquets sideways on flat surfaces as this may damage the outer blooms.

12. Keep bouquets in water until the last possible moment to keep flowers fresh and hydrated.

13. Use buckets with 1 or 2 bouquets for transportation so the bouquets can be transported upright. If transporting in one vehicle, it is recommended to remove the water to avoid spillage in transit that can damage the flowers and/or vehicle carpet/upholstery.

14. Do not expose the flowers to heat at any time before the function (do not leave outdoors or in a car, etc.).

15. Before using, you may trim the stems within a 1/2 an inch of the ribbon or to desired length for final presentation.

Enjoy your event!!!
